DECLARATION

I am a student of final year B.Tech in COMPUTER SCIENCE AND ENGINEERING at Presidency University, Bengaluru, named **TEJASHWINI BV**, hereby declare that the internship work titled **"AI-Based Face Recognition Attendance Management System"** has been independently carried out by me and submitted in partial fulfillment for the award of the degree of B.Tech in COMPUTER SCIENCE and ENGINEERING during the academic year of 2025-2026. Further, the matter embodied in the internship has not been submitted previously by anybody for the award of any Degree or Diploma to any other institution.

ABSTRACT

The internship experience at the Rail Wheel Factory revolves around solving the drawbacks that come with conventional methods of attendance recording in a highly automated manufacturing setting. With the growing trend of industrial firms undergoing digital transformation, there is a need for companies to adopt more effective ways of managing their workforce. An internship was carried out with the main objective of coming up with an effective method of managing attendance for the factory by developing an intelligent system of recording attendance.

In this internship, the idea behind the solution revolves around developing an "AI-based Face Recognition Attendance Management System." In this solution, full-stack web development was utilized to develop both the front-end part and back-end functionalities of the application. For instance, the front-end part was designed to offer an easy to use user interface. The back-end architecture was built to support data handling activities such as validation and storage of attendance information. The system uses machine learning and AI technologies to detect the faces of individuals and match them to those stored in a database.

This system has proven to be highly accurate in identifying employees, with consistent performance under diverse environmental settings. The shift from manual registers to this automated system has played a key role in decreasing administrative workload and minimizing errors while providing instant reports for human resources management. This internship has been able to showcase the use of full-stack development and artificial intelligence in addressing real-life industrial workflow problems.
